

Swedish Hoof School Inc. wants to make a difference.

- A difference in the number of horses that, completely unnecessary, get put down prematurely because of some hoof related condition like Laminitis, Coffin bone rotation or Distal descent.

We have the knowledge to save those horses and we would like to share it with you.

- A difference in the number of horses that suffer pain and hardship because of people's lack of knowledge about the horse's digestive system.

We have that knowledge too and we would like to share that also.

We don't want to offer you just another great horse related clinic (there are plenty of those) we want to offer you a life changing learning experience. We don't just want to tell you **how** things are. We want to give you logical explanations to **why** it is so. We want to show you pictures and video sequences to back up everything we say. We don't want you to believe what we say just because we say it. We want you to believe it when you believe the logical explanation we give you.

It took me nine years of mistakes and failures to find a way to offer my horses free choice of hay in a way that worked with the environment we keep domesticated horses in and at the same time forced the horses to eat in the way they are made for. Today we have solutions for everybody regardless of if the horses are inside 24/7 (lets hope not) or outside 24/7 (or anything in between). This is a complete revolution and only masochists choose other solutions when they have seen ours.

We would like all this to become common knowledge and we would like to start with you. We want you to attend one of our clinics where we will not only tell how things work; we will also explain why it works that way, what you can do about it and why that works. To us "the why" is extremely important. We want you to understand not only accept.

To get the hoof knowledge we have studied existing techniques, dissected more than thousand hooves and compared them with each other and with hooves on living horses, feral and domesticated. We have taken this knowledge and applied it to hoof care of thousands of horses of all breeds, sizes and ages, sick and sound. To get even more knowledge we educated a group of 26 European hoof care specialists and collected even their experiences. Now we have used four years to try to prove our selves wrong but instead landed in a firm belief that our model of explanation works on at least 99% of all horses.

The two major features with our model are firstly that it works and secondly that it is extremely easy to perform. To be completely honest, it is remarkably easier than the traditional methods and all other methods we have found to compare with and it is easier both to teach and to learn. We have proven that by teaching over 800 Swedish horse owners to do a magnificent job

maintaining their horse's hooves themselves.

Sadly enough there are still traditionalists that say that this is too good to be true but none from that group has attended our education. Both farriers and veterinarians that have attended our education are astonished and most farriers that have attended the education have stopped nailing on metal shoes and are now recommending hoof boot as protection when needed. It is hard to keep doing the thing when you understand what it does to the horse.

We need your help.

We are well known in Sweden and horse owners contact us all the time and want us to come and give a clinic in their area but here in US we are still unknown and to be able to give a clinic in your area we need your help.

We need help finding a good venue that seats about 50 people and is good for a slide show presentation and we need help spreading the word in your surroundings. Naturally we pick up the bill and naturally you attend the clinic for free.

Please, help us help you help your horse.

Our clinics create awareness and understanding. They are just as good for horse owners without any prior experience in the field as they are for continuing education of veterinarians and veteran farriers that want to keep up with where contemporary horse keeping is heading. We will answer lots of traditionally unanswered questions and solve lots of traditional mysteries. We don't lower ourselves to bickering and blame. We will explain why certain things work and why other things don't work. Every thing we say is based on research, proven by experience and clarified by photographs or video sequences. We make traditionally complex things easy to understand. We will leave you with only one big question and that is why this is not common knowledge.

Experience shows that our clinics create a revolution for the wellness of the horse by making it easier for the horse owner.

-We will have you understand why you should not give your horse two, three or even four servings of hay each day and we will give you a solution to the problem that is so easy that only a masochist would choose not to comply.

What makes the Swedish Hoof School clinics so special?

- We don't only tell you how it is, we also explain why it is like that and we keep explaining until everybody has understood. It is important to us that you not only accept but also understand.

What you can do to be sure not to miss a clinic date.

1. Host a clinic yourself.
2. Keep track of our website.
3. Send us an email and we will try to remind you when your neighbour is hosting a clinic.
